

Hi My Name Is

ABDAN HAFIDZ

Backend Developer & Competitive Programmer

I was born in Binjai, 11 August 2005. I am currently a Bachelor's student in Artificial Intelligence Engineering at the Sepuluh Nopember Institute of Technology (ITS) Surabaya. Over the course of four years, I have mastered programming skills to an advanced level. In the last three years I have also worked at several institutions in the website development department, technology division, and full-stack development. I have often won National Informatics Competitions for the last two years. I also create content on social media. I have the advantage of being someone who is able to think constructively, logically, thoroughly and carefully, and efficiently in doing my work. The weakness I have is that I am not good at responding emotionally to people's communications because of my nature of always prioritizing logistics over emotional matters.
